TrimRide Investor One-Pager

What TrimRide Is

TrimRide is a real-time two-sided barber marketplace with separate customer and barber mobile apps already working in a live development environment.

The Problem

Customers face slow, uncertain booking experiences.

Barbers face unpredictable demand and weak digital dispatch tools.

Most current alternatives are fragmented, delayed, and not built for real-time neighborhood matching.

The Solution

TrimRide delivers:

- Fast customer request flow
- Live booking status progression
- Barber online availability control
- Real-time request updates and lifecycle events
- Push-ready notification pipeline

Product Proof (Working Today)

- Customer app authentication and session flow
- Barber app authentication and dashboard flow
- Booking request and response path
- Active booking visibility and tracking surfaces
- Backend API with database connectivity
- Real-time socket event plumbing in both apps
- Startup health checks for backend + both app runtimes

Why This Is Investable Now

This is not a concept stage product.

Core two-sided workflows are already functional and demonstrable.

Funding will accelerate production hardening and launch, not basic feature discovery.

Business Model

- Commission on completed bookings
- Barber growth tooling and promotions
- Featured placement and subscription upsells

Go-To-Market (Pilot First)

- Launch in one focused city zone
- Onboard curated barber supply
- Acquire demand locally and optimize conversion
- Expand zone-by-zone based on retention and repeat rates

Funding Ask

We are raising to move from validated MVP to scalable launch-ready product.

Use of funds:

- Production-grade payments and compliance flow

- Reliability and observability
- QA and release automation
- Pilot launch execution and growth testing

Milestone Target After Funding

A stable, payment-ready, launch-grade marketplace with measurable pilot traction and repeatable expansion playbook.

Closing

TrimRide already proves real-time marketplace execution across both sides.

The next capital unlock is scale, reliability, and market capture.
